

Understanding the Estimate Part 2

Foreman's Development Series

The Foreman Development Series is the creation and property of the IBEW 7th District. It is copyrighted material that is entrusted to and to be used only by Instructors who have completed the FDS Train the Trainer Classes.

What Estimate?

- **How many of you have actually seen an Estimate?**
- **How many of you have seen a monthly job cost report?**
 - **Why wouldn't the Contractor want to show you this information?**
 - **Why wouldn't the Foreman want to see this information?**

Objectives

In the 1st half of this module we're going to cover:

- The computerized estimating process.
- How a Contractor comes up with his Material Costs and Labor Units.

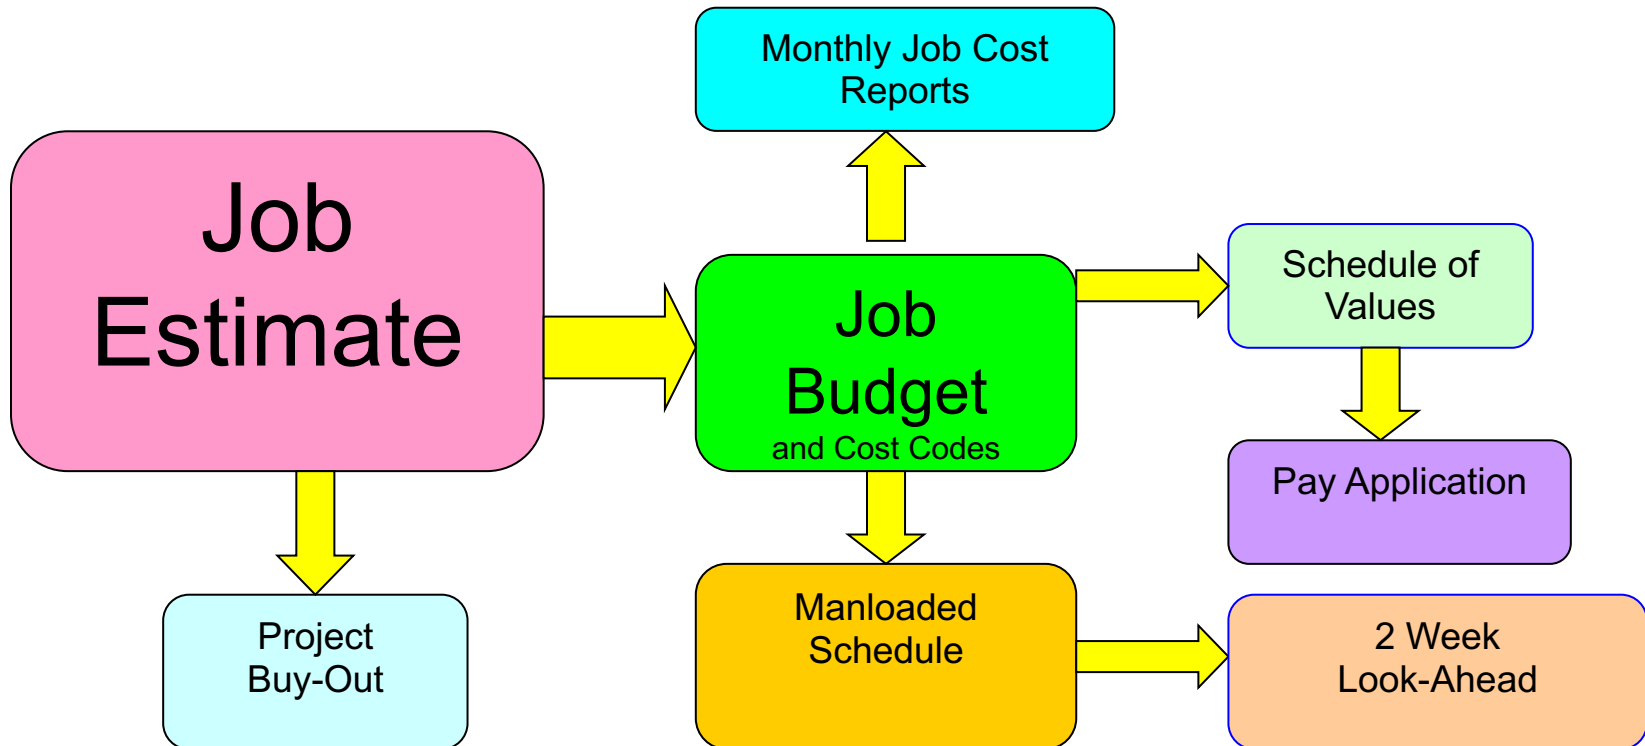

The 2nd half of this module we will look at how Labor Units give us a way to check our Install Rates:

- Are we installing our materials in the time given to us by the Job Estimate?

What's the Point?

As we've seen in other Foreman Development modules, the Job Estimate affects all other aspects of the Project:

Estimating Software Functions

or
esti

3) **ary**

4) **or Recapitulation**

Advantages of Estimating Software

- **Speed** – The computer is great at number crunching. This can save up to 75% on estimating overhead.

- **Accuracy** – Not only on take offs but for tracking both labor and material costs over the life of the project.

- **Customized** – The software can be modified for any and all specific job requirements.

- **Consistency** – Software enables the Estimator to use the exact same procedures each time. This provides a basis to compare estimates and actual job costs over time and adjust accordingly.

Estimating Material Costs

- Big ticket items like Light Fixtures or Switchgear are quoted as separate packages in the Estimate.
- Getting quotes on Bulk buys will save \$\$\$\$.
- Thousands of misc. electrical parts also have to be priced as part of the Estimate.

Part 2 – Estimating Labor

GORDIAN®

Electrical Costs

with RSMeans data

2020

43rd annual edition

National Electrical Contractors Association

Manual of Labor Units 2019-2020

NECA
NATIONAL ELECTRICAL CONTRACTORS ASSOCIATION

Photo: Mike Electric Company, Jacksonville, FL

Labor Units - Method #2

Labor Units are expressed in man-hours for the installation of:

- E = One or per each item
- C = Per one hundred items
- C = Per one hundred linear feet of the item
- M = Per one thousand linear feet of the item
- LF = Per linear foot

Labor Units vary by Jobsite conditions:

- Normal
- Difficult
- Very Difficult

What's Included?

What is and isn't included in the Labor Unit?

- **Scope**
- **Work Operations NOT included**
- **Application Instructions**

What is in a Labor Unit?

NECA's Labor Units include varying amounts
A Hotel Ballroom has (100) T-grid light fixtures and
of (4) basic components:
you have 2 men working on the project.

- **Material handling:**

How many lights should they be packing and clean up

- **Drawing Study, Measurement and Layout**

How long should it take to finish installing all of the ballroom lights?

- **Actual Installation** - plus getting and returning any tools needed for the job

2 x 4 fixture = .8 manhours each x 100 = 80 hours

= 2 JW / 40 hours each

64% Efficiency

- **Non-productive labor**

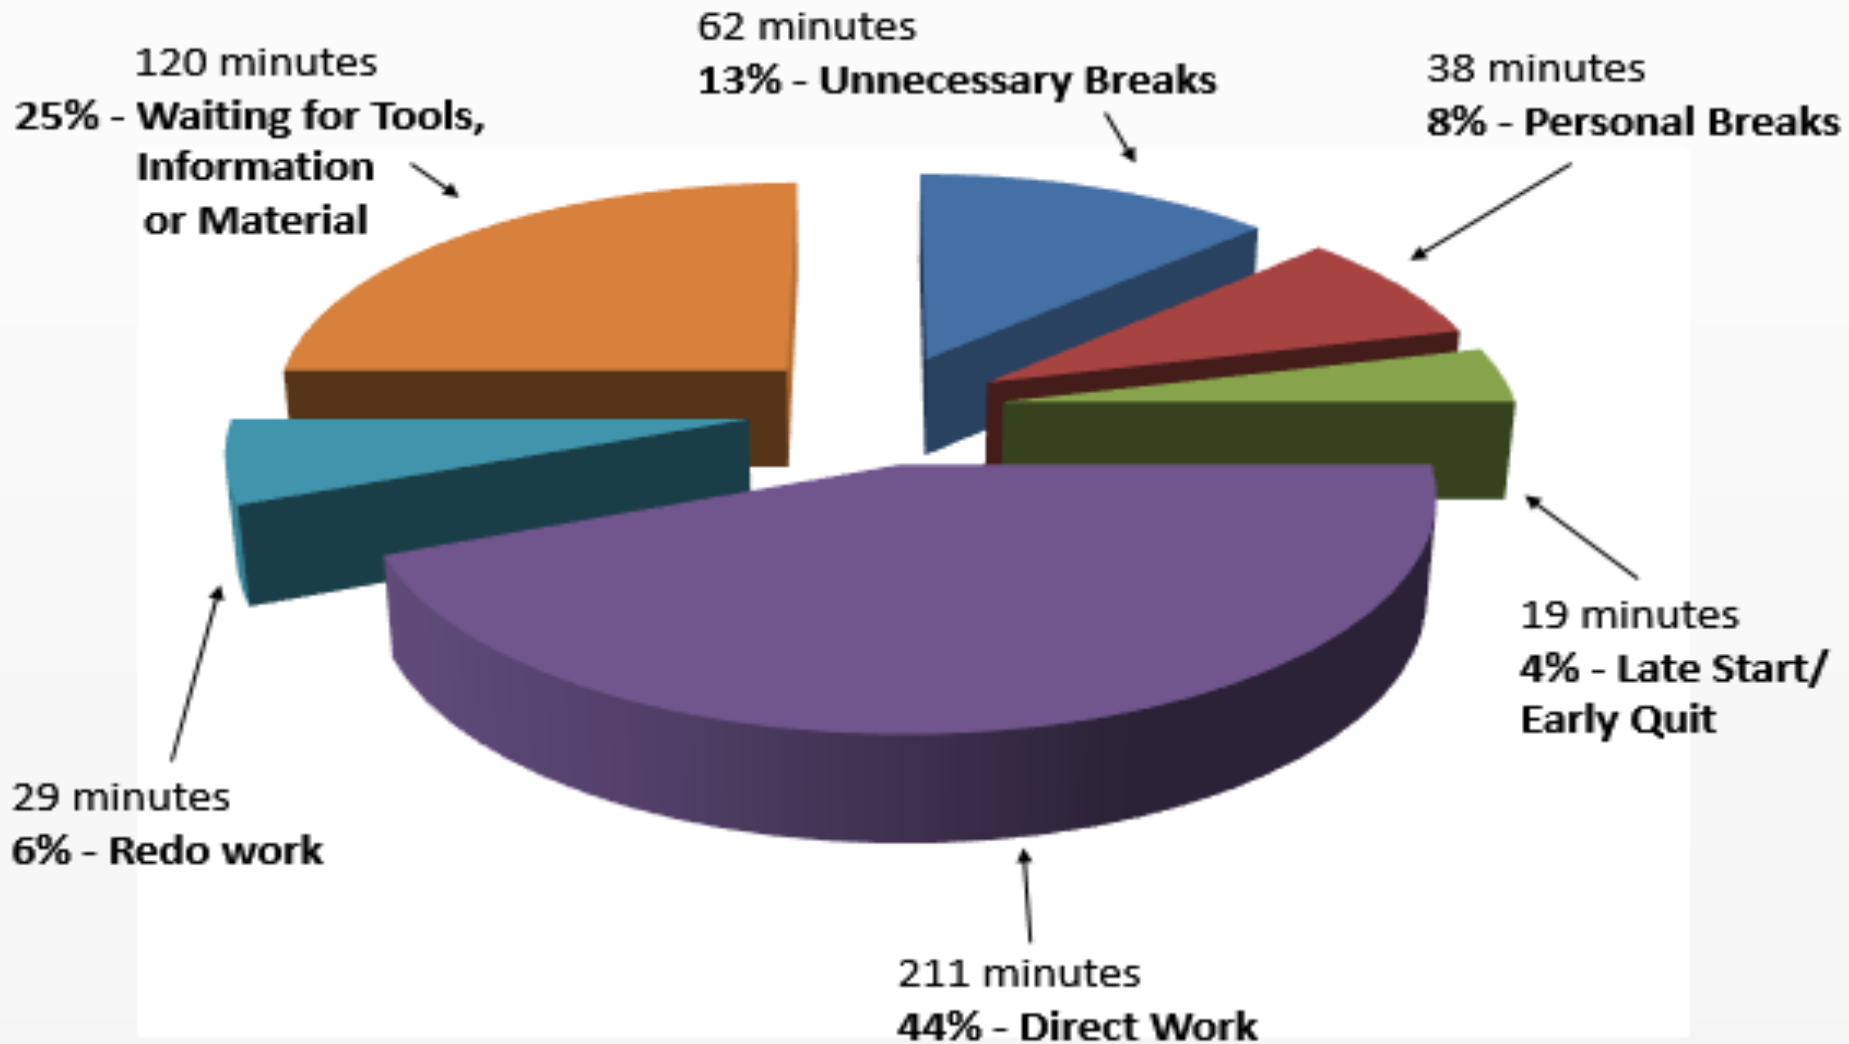

Actual manhours per man per day

– RS Means

- Normal Breaks, walking, getting water, etc.

Managing Production

Typical Labor Units

Our 60' x 60' Ballroom has 30 duplex receptacles
– how long should it take to trim out?

Duplex Receptacle = 30 man hours / C

SS trim plates = 6.25 man hours / C

$30/100 = .3 \times 30 = 9$ man hours

$6.25/100 = .0625 \times 30 = \underline{1.87}$ man hours

per NECA = **11 manhours Total**

RS Means: 11 hours x 64% efficiency

= 7 man hours actual time spent installing

What are your Labor Units?

- Your company had specific Labor Units that they used when they bid your job.
- Did your crew make the Estimate when they installed that big rack of 4" EMT conduits?
- The material has to be installed in the time allotted by the estimator.

Installation Rates? – Method #3

Installation Rate = Quantity installed (conduit, receptacles, etc.) within a certain amount of time.

- By using the Labor Units from the Estimate you and your Project Manager can add up the total labor man-hours for a specific task, a project, or a small area.
- This gives you an installation rate of quantity and man-hours for an overhead conduit rack, installing your Ballroom light fixtures or trimming out the duplex receptacles.

Figure your Install Rate

A 2-person crew was told to install 2,000 feet of 4" EMT. The NECA Labor Units for this material under normal conditions is 16 Labor Units per 100' of conduit.

1. How many feet of conduit should one person install in an hour?
6.25 feet per man hour
2. How long should this entire task take?
320 hours
3. How much conduit should be installed by your 2-man crew at the end of 5 days?
500 feet
4. One day I had 4 people running conduit. How many feet of conduit should they have put in?
200 feet

An Install Rate Example

Items+ByProducts

Item #	Item Name	Quantity	Price 1	Ext Price 1	Bid Lbr	Bid Lbr Ext	CCode
	Category: CCode = Feeder Rough						

- A 500' long conduit rack with (4) 4" EMT conduits

- Supports every 8' = 63 racks

$.2115 \times 100 = \text{Install rate of } 21.15\text{MH/C}$

Extended Costs – Method #4

Extended Material and Labor Costs

Description / Size	Quantity	Unit	Material Units Cost	Material Result	Labor Units (in Manhours)	Labor Result (in Manhours)
EMT 1/2"	4330	ft.	0.5788	\$2,506.20	0.045	194.85
EMT 3/4"	4715	ft.	1.0183	\$4,801.28	0.05	235.75

Total				\$13,133.29		555.75
0.5788 Unit Cost						
.05 Manhours						

Material Prices updated 11/06/23 - Graybar
NECA Normal - 2010

Job Cost Accounting – Method #5

01 / Mobilization – Job site set up & removal: trailers, office, gang boxes, materials, etc.

02 / Demolition – Removals and demolition

03 / Site work – Underground, pole lights, temporary power, etc.

04 / Branch – conduit, boxes and wire; up to 1”

05 / Feeders – conduit, boxes and wire; 1 ¼” and above

06 / Gear – Switchgear, transformers, starters, disconnects, contactors, etc.

07 / Fixtures – receiving and installing any and all fixtures

08 / Special Systems – Security, fire alarm, PA, etc., including all conduit and wire
- does not include sub contractor’s work

09 / Devices – plugs and switches, trim plates, etc.

10 / Warranty Work

Tracking Labor Estimates by Area

- Some Contractors will break their Estimate into small areas or phases.
 - So their take-offs will show the total labor and materials quantities used in each of these small areas.
- This method gives the Foreman in the field a simpler way to track their labor in small, quantifiable work areas.

Labor Tracking

COLUMNS IN GREEN ARE INPUT

COLUMNS IN BLUE CONTAIN FORMULAS

Sweetheart Electric

THE "MANUAL HRS TO COMPLETE" COLUMN DEFAULT IS CALCULATED AT REMAINING VALUE & MUST BE UPDATED TO PROJECTED VALUES

JOB NAME: Trinity Office Towers

YOU MUST ENTER EITHER A PERCENT TO COMPLETE VALUE OR A MANUAL HRS TO COMPLETE VALUE, BUT NOT BOTH. WHEN PHASES ARE COMPLETE ENTER 100% IN THE PERCENT COMPLETE COLUMN & DELETE ANY VALUES IN THE MANUAL HRS TO COMPLETE CELL

DATE: 11.20.2019

Labor Hours have been exceeded or the Estimate was short on Labor Hours

Daily Labor Tracking

- Each activity has an individual ID number that corresponds to the electrical sheet and phase of work - just as they were taken off in the Estimating software.
- The company will use a cost coding system that matches these ID numbers.
- The Foreman will enter all of the hours on a digital time card every day
 - Every hour is cost coded to match what each worker was doing.

Production?

We've looked at various ways to track your installation rates:

- 1) The "Seat of your Pants"
- 2) Using NECA Labor Units
- 3) Using the Estimate's Installation rates
- 4) Extended Costs by Area
- 5) Cost Codes and Labor Tracking

**Are you making your Labor
Installation Rates??**

Summary

Anyone want to be an Estimator?

- Well, maybe not, but at least we have a better understanding of how they do their work.
- We need to be more competitive!
 - In order to do that we need to be more productive.
 - System Productivity and checking our Labor Install Rates are tools we can use to help us do that.
